Other/risk not reported or identified	≤3	100%	≤3	40%		50%	≤3	25%	2%	
Total	1	100%	5	100%	100%	100%	8	100%	100%	

Notes

1. Includes only persons reported with HIV infection who have not developed AIDS.
2. A total of 211 cases of HIV infection have been reported to the Vermont Department of Health. Of these, 202 are believed to be living.
3. Vermont data include only those people who were residents of Vermont at the time of initial diagnosis.
4. The HIV/AIDS Surveillance Program does not typically release data with values ≤3.
5. Race/Ethnicity is unknown for one individual living with HIV.
6. Source of US Data: Centers for Disease Control and Prevention (CDC) HIV/AIDS Surveillance Report, 2003 (Vol.15)

7. National data are available for different age categories and are not directly comparable.

8. National data are available for different race and ethnicity categories and are not directly comparable.

9. These exposure categories are all included in the category "Other" in the national data.

10. Estimated numbers after adjusting reported cases for reporting delays and redistribution of cases initially reported with unidentified risk.
